

PURSUIT SYSTEMS

PURSUIT CRANE

The Pursuit Crane is the result of years of design, engineering and testing to create the most capable stabilized remote crane in the industry. Tested over a grueling course at speeds in excess of one hundred twenty miles per hour and temperatures above 130 degrees, the Pursuit Crane is also completely impervious to rain and snow. It comes to your location ready for shooting in its own fully enclosed support trailer with your choice of gyro heads already mounted. Paired with our Porsche Turbo Cayenne camera car it provides lens heights of approximately twenty one feet above to six feet below the ground plane. Adaptive electronics in our unique "Flight Dek" controller enable precise movement from 1/100 to more than 90 degrees/sec.
