R1 CARBON FIBER ARM WITH MOTION BASE and HEAD

The R1. The original carbon fiber rigging system designed for both still and cinema cameras continues to improve. We have recently added our new motion base to the R1's available accessories. Teamed up with our unique light-weight two/three axis head it offers a 180 degree range of motion with smooth precise starts and stops. Best of all, the motion base attaches to the car in minimal time, just like the original.
